CAREER SUMMARY

I am an Ecologist (2014), Master's in Zoology (2018), and PhD in Ecology (2024) all from Universidade Estadual Paulista, Rio Claro/SP, Brazil. I performed over 700 hours of additional education at Brazilian and international institutions, focusing on statistical and ecological modeling.

My expertise encompasses spatial ecology, landscape ecology, ecological modeling, species distribution modeling (SDM), ecological and spatial data analysis, impacts of habitat loss and fragmentation on biodiversity, amphibian ecology, teaching the R programming language.

Since 2017, I have authored over 30 articles published in prominent Ecology journals. These publications primarily showcase the outcomes of my research on the effects of landscape structure and climate change on biodiversity in South America, with a focus on the Atlantic Forest hotspot.

Currently, I am a Postdoctoral researcher at [lab.exe](#) at [Unicamp](#) and my research involves integrating landscape metrics and species distribution modeling (SDM) to assess the impacts of edge effects, fires, and climate change on the distribution and interactions of animals and plants across multiple spatial scales in the Amazon.

I am actively engaged in the development of tools to calculate landscape metrics for large spatial extents using the R language and GRASS GIS. In addition, I have dedicated over 500 hours to teaching and promoting the use of the R language through workshops, undergraduate and graduate courses, and the publication of the book 'Análises Ecológicas no R'.

RESEARCH EXPERIENCE

- **Undergraduate research** 2013-2015
Title: Effect of fragmentation on the persistence of anuran amphibians (Amphibia: Anura) within the Atlantic Forest
Aim: To evaluate the relative contribution of landscape indices (percentage of forest cover, connectivity, relief and urban proximity) to the persistence of species using species distribution modeling.
- **Master research** 2016-2018
Title: Effect of Landscape Modifications and Climate Changes on the Persistence of Amphibians in the Atlantic Forest
Aim: To present an assessment of the surveys of the amphibian communities for the Atlantic Forest; to investigate how habitat loss and fragmentation affect the persistence of amphibians; and to investigate how climate change affect the future persistence of the genus *Brachycephalus*.
- **Doctoral research** 2020-2024
Title: Landscape structure as a predictor of taxonomic and functional diversity of amphibians in the Atlantic Forest
Aim: To analyze the structure of landscapes throughout the Atlantic Forest; to analyze how landscape structure affects the taxonomic and functional diversity of amphibian communities; and to analyze this same question of species-specific mode, in addition to analyzing co-occurrences using JSDMs.
- **Postdoctoral research** 2024-actual
Title: Impacts of edge effects, fire, and climate change on vegetation composition and functional diversity across spatial scales in the Amazon rainforest
Aim: Understand how edge effects, fires and climate change acting at local scales can influence the distribution and composition patterns of vegetation at different spatial scales in the Amazon biome, also affecting the potential distribution of vertebrate fauna. In addition, we will investigate how plant functional attributes respond to these factors, with implications for the functional diversity of plant and animal communities.
