## RESEARCH EXPERIENCE

---

<b>Doctoral research</b> Title: Landscape structure as a predictor of taxonomic and functional diversity of amphibians in the Atlantic Forest Aim: analyzing the structure of landscapes throughout the Atlantic Forest; analyze how landscape structure affects the taxonomic and functional diversity of amphibian communities; and analyze this same question of species-specific mode, in addition to analyzing co-occurrences using JSDMs.	<i>2020-currently</i>
<b>Master research</b> Title: Effect of Landscape Modifications and Climate Changes on the Persistence of Amphibians in the Atlantic Forest Aim: to present an assessment of the surveys of the amphibian communities for the Atlantic Forest; to investigate how habitat loss and fragmentation affect the persistence of amphibians; and to investigate how climate change affect the future persistence of the genus <i>Brachycephalus</i> .	<i>2016-2018</i>

**Undergraduate research***2013-2015*

Title: Effect of fragmentation on the persistence of anuran amphibians (Amphibia: Anura) within the Atlantic Forest

Aim: evaluate the relative contribution of landscape indices (percentage of forest cover, connectivity, relief and urban proximity) to the persistence of species using species distribution modeling.
